

Practica Ingest GCP

1. Crear un Bucket Regional standard en Finlandia llamado demo-bucket-edvai

demo-bucket-edvai	Nov 6, 2023, 8:00:42 PM	Region	europe-north1	Standard
-----------------------------------	-------------------------	--------	---------------	----------

1. Crear un bucket multiregional standard en US llamado data-bucket-demo-1

data-bucket-demo-1	Mar 2, 2023, 9:43:31 AM	Multi-region	us	Standard
------------------------------------	-------------------------	--------------	----	----------

2. Hacer ingest con la herramienta CLI Gsutil de 5 archivos csv en el bucket data-bucket-demo-1 (mostrar mediante un print screen esta tarea)

3. Utilizar el servicio de storage transfer para crear un job que copie los archivos que se encuentran en data-bucket-demo-1 a demo-bucket-edvai

CREATE TRANSFER JOB

Transfer jobs

Agent pools

Power near real-time analytics and replication with event-driven transfers NEW

You can now capture changes faster at your Google Cloud Storage and Amazon S3 sources via event-driven transfers, enabling you to act on your data in near real time. To get started, create a transfer job with a Pub/Sub- or AWS SQS-based event stream configured to send event notifications when objects are created or updated.

[CREATE TRANSFER JOB](#)[LEARN MORE](#)

Quickly and securely transfer data to, from, and between cloud and on-premises storage systems. Sources include Google Cloud Storage, Amazon S3, Azure Storage, filesystems, and more. [Learn more](#)
